

Tan Ngoc Tran

Software Development Project Manager / Scrum Master

District 2, HCMC

+84 792162177

tan.tran1992@outlook.com

About Me:

My professional journey began as a developer, where I gained valuable technical skills and experience for two years. Then, I decided to switch my career path and pursue a role as a Project Manager, which I have been doing for more than five years now. In this position, I have constantly challenged myself to learn new things, not only about Project Management domains, but also about other technical aspects that are relevant to my work.

Experience

Apr-2024 -> Now

Scrum Master • **NAB Innovation Center Vietnam**

Responsibility:

- Served as Scrum Master for a DevOps squad and a Business Run squad of 35 members in Internet Banking and NAB Connect domains.
- Manage and maintain the squad backlog and sprint backlog to adhere to NAB delivery standards and metrics.
- Keep track the progress of the Big Rocks initiatives to ensure they are aligned with the domain's goal objectives via Security dashboards.
- Monitor the domain assets hygiene on the Critical Hygiene Framework board and address any security risks to the squad backlog to maintain operational risk control.
- Serving as a primary point of contact for other squad engagements to support the delivery of various initiatives such as Graviton, Canary Deployment, and NEF2.0.
- Participate in release meetings and diligently update the release calendar to accurately reflect the squad's release plan; callout the risk and conflict releases among squads.

What I have archived:

- Reduced unplanned DevOps work from 15% to 10% in the first six months at NAB, maintaining it under 5% in FY25.
- Increased DevOps squad's work delivery from 77% to 81% per sprint, now at 89% on average per sprint
- Received various recognition from the Engineering Manager, Team Lead, and team members for supporting the team with planning, tracking work progress, and enhancing their engineering experience.

What I have learnt:

- Acquired knowledge of the Progressive Elaboration process and engaged all stakeholders to successfully deliver a feature.
- Experience the Scaled Agile model in a large corporate settings.
- Gain comprehensive knowledge of application security within banking environments.

Jun-2022 -> Apr-2024

Project Manager (Tech) • Parcel Perform

Responsibility:

- Managed a cross functional team size maximum 17 people working toward 8 different domains such as Public API, Data Structure, Inbound Integration, Pre-calculated fields, SLA calculation and Statistic Charts…
- Keep the squad backlog updated with the most important tasks according to the squad's capacity, completed on time and with high quality.
- Responsible for setting and monitoring important squad metrics, which are Squad Velocity, Bug Rate, Estimation Deviation, Timeline Deviation, ...
- Do the risk register, identify the potential threats and mitigations prior the epic development and keep regularly tracking the risks / issues happening during the development cycle.

What I have archived:

- Ensure a smooth and successful deployment of shared services across different squads. Monitor post-deployment and handle any incident that might occur together with the team.
- Maintain the Squad Velocity at a stable pace.

What I have learnt:

- The Spotify Squad – Tribe – Chapter model
- Experience XP & Lean working model; to avoid parallel work and focus on critical path works.
- Product Software Development Mindset
- Incident handling process following the squad domains.
- Maintain the squad morale throughout work – life balance and 1-1 meetings.

Mar-2019 -> May-2022

Project Manager & Scrum Master • FPT Software HCM

Responsibility:

- Maximum team size: 25 members in 2 different projects at same time.
- Participated in 7 projects in 3 different domains: finance, e-commerce, digital factory.
- Ensure timely, within scope and within budget delivery of projects by managing all aspects of project planning, execution, and closure.
- Communicating and collaborating with all relevant stakeholders to ensure the technical feasibility of the project outcomes.
- Measuring Project Metrics such as EE, Leakage, Correction Cost, Defect Rate, Timeliness… following the company standards.
- Travel to customers site in EU & US to collect requirements, deploy the application, conduct user training, user acceptance tests....

What I have archived:

- Best Performer in 2019, 2020
- Earned PSMI certificate in 2020.
- Coached two sub-PMs.

What I have learnt:

- The Waterfall and Agile working model in Software development
- Software development processes following the CMMi level 5

Apr-2018 -> Mar-2019

Senior Software Developer • FPT Software HCM

- As an OT engineer, I travelled onsite to a customer factory located in the US, to research and test the solution that can enable legacy factory tools to transfer data to Predix cloud.
- Strong experience working with OPC-UA server software such as: Ignition OPC-UA server, Kepware OPC server, Indusoft, Iconics.
- Work with latest IIoT (Industrial Internet of things) platform such as GE Predix, Siemens Mindsphere, PTC Thingworx, AWS to help factories and enterprise in the digital transformation process.

Mar-2017 -> Mar-2018

IoT R&D Engineer • Inspectorio Inc.

- Research and development IoT projects of Inspectorio company. Understand an IoT architecture and features from devices to gateways and to cloud.
- Research and testing BLE technology with beacons and gateway in a use-case of tracking garment in a factory.
- Research and testing different types of sensors for factory monitoring applications such as temperature, humidity, and motion.

Education

The Manchester Metropolitan University, Manchester city, UK (2015-2016)

- Distinction degree in MSc, Industrial Communication and Automation

Ho Chi Minh University of Technology (BKHCM), Ho Chi Minh city, VN (2010-2015)

- Good degree in Bachelor of Engineering, Automation and Control System
